

Cleanboy*

Semi Automatic Blanket Cleaning Device

BENEFITS

- Less material needed (no rags, less solvent).
- Quicker wash cycles.
- Lower risk of exposure to solvent.
- Usable on all kinds of presses and press cylinders.
- Less costly than a stationary blanket cleaning device.
- Can be used on other parts of the press.

SUSTAINABILITY

- cleanboy* eliminates the need of rags and rag recycling.
- It also provides a considerable reduction in solvent use.

The *cleanboy** is a small and user-friendly blanket cleaning device that cleans printing blankets quickly and efficiently without the mess. No more rags and dirty hands.

The *cleanboy** consists of a hand-held device that is put on the blanket. An endless cleaning tape is driven by a motor; solvent is sprayed on the cleaning tape and simultaneously vacuumed away from the blanket and cleaning tape.

The dirt and solvent is vacuumed back into the attached solvent barrel for filtration, reuse and easy disposal.

With castors the *cleanboy** is quickly moved from one tower to the next.

Features:

Ergonomic, light-weight design of hand-held device for comfortable use.

With the push of a button solvent spraying, cleaning and suction is activated.

Automatic filtering of solvent during the cleaning process so it can be reused numerous times.

Preset speed guarantees consistent, efficient cleaning.

30 sec. delayed turn-off of suction for drip-free cleaning.

Hand-held device with endless cleaning tape
