NELA

Dummy Plate Feeder / Plate Buffer

The NELA Dummy Plate Feeder/Plate Buffer will feed dummy plates onto the conveyor. The device will also be capable to pick-up plates coming from the plate processor in overflow situations. No operator intervention is required to load the plates back onto the conveyor. The buffer system will feed the plates automatically back into the system. This device is a great addition to a production environment with two high-speed CTP devices connected to one punch/bender. An overflow situation in peak times will be avoided and the CTP device will not be slowed down. The system is programmed to give starter plates highest priority. Built in barcoding allows proper storage of plates.

Features:

- Very small footprint (Unit is placed on top of conveyor system)
- Plate capacity up to 300 plates /per hour
- Very operator friendly of plate loading of dummy plates
- Device can be added on existing conveyor line
- No stopping of imaging devices, because of buffer capability
