

High Efficiency Washing Systems for the Printing Industry

innowatec
Dipl. Ing. Grieger & Englert GmbH & Co. KG

Innowatec stands for innovative solutions in washing technology.

Our goal is to be your experienced and reliable partner for automatic washing systems in the printing industry.

Our 25 years of experience in the field of printing machines testifies to our expertise.

Innovative Brush Rollers

Rubber blankets used in offset printing machines typically need to be cleaned depending on the printing job and cycle. The duration of the washing time is determined by the roller areas that exhibit the heaviest deposits of paper dust and ink residues.

Other conventional brush systems with only one brush strength perform the cleaning without taking into account the varying degree of soiling. Therefore, the cleaning effect occurs later at the edges of the rubber blankets, since these areas exhibit the thickest deposit of paper dust. This costs time and money!

Innowatec's brush roller cleans faster and better even in your existing brush system!

Innowatec's innovative, segmented brush rollers with varying degrees of hardness ensure a clearly higher cleaning efficiency. They are specifically designed to adjust for problematic areas on the rubber blanket. The increased paper dust deposit in the edge region can be removed considerably faster than by using a conventional brush roller

As a result, the washing times and waste quantities as well as solvent consumption and disposal costs are reduced significantly.

In addition, a partial wear of the brush roller does not automatically lead to the disposal of the entire brush roller. It is now possible to replace single brush segments and shaft pins.

Your benefits:

- Reduction of washing cycle times, waste and consumables
- Extended service life due to exchangeable bearing pins
- Environmentally friendly operation thanks to minimized energy consumption and waste
- Constant quality and market-conforming prices

Compatible High Precision Spare Parts

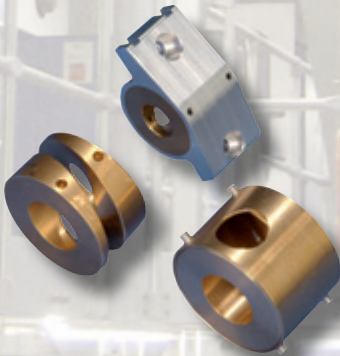

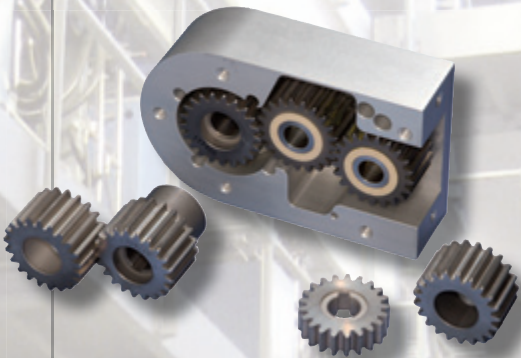

Thanks to the advance cutting-edge technologies and efficient production procedures, we offer affordable spare parts for your existing washing systems as well as other components required for your printing operation.

Our parts are 100% compatible with the original components. Special parts are available upon request.

Furthermore, we provide conventional new rollers as well as rollers with new brushes. A highly flexible and reliable “just-in-time” delivery is our pledge to you.

Your benefits:

- Expert advice
- Highest quality
- Attractive price advantage
- 100% compatibility with original parts
- High flexibility
- Reliable delivery

The Innowatec team is at your service.
