NELA Punch- and Bending Devices

NELA D-Leafer

For offset plates with slipsheets

Compatible with all CtP devices

- The NELA D-Leafer is the newest brain child of the NELA R&D Department. Even though the concept of automatic **slip-sheet removal** is not entirely new, the NELA D-Leafer combines all the necessary features of a fully automatic slip-sheet remover for a value previously not available to the market.
- Plates are placed in the **sliding tabletop** loading section of the D-Leafer. **Automatic grippers** carefully remove the paper from the plate and deposit it in the **roll around paper bin**. In the meantime, the plate is picked-up with suction cups and transported onto the deleafed plate stack.
- **Features:**
 - For single width plates
 - For one plate size
 - Min. plate size: 256x480 mm
 - Max. plate size: 430x669 mm
 - Capacity: 300 plates
 - Removable paper bin
- **Benefits:**
 - Small footprint
 - Compatible with all CtP devices
 - For all plate types
 - Saves time and therefore money
 - No damaged plates
 - Easy operation
